Chord Substitution

Each chord triad is made up of three different notes of the scale. This means that any of those three notes can be played over one chord. Here is a chart that shows how each note can function with each of the seven chords:

Scale degrees and corresponding chords

Degree	Root	3rd	5th
Do	**I**	vi	**IV**
Re	ii	vii°	**V**
Mi	iii	**I**	vi
Fa	**IV**	ii	vii°
Sol	**V**	iii	**I**
La	vi	**IV**	ii
Ti	vii°	**V**	iii

Since Do can function as the root of the I, the 3rd of the vi, or the 5th of the IV, any of those chords can be played with it. The same concept applies to all of the other chords. This allows the player to create alternate chordal arrangements to any tune. This is useful when arranging pieces for ensemble playing or performances.
