FINGERS OF STEEL® PUBLICATIONS

Fret Position Reference Guide For Mountain Dulcimer, Hurdy Gurdy, And Other Diatonic Instruments

by Richard Ash

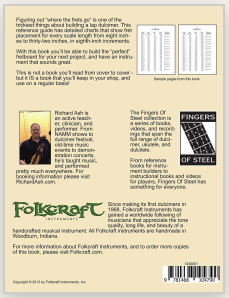

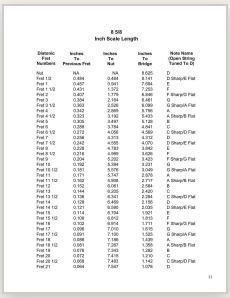

Accurate fret placement can make or break a homemade mountain dulcimer. Richard Ash's Fret Position Reference Guide For Mountain Dulcimer, Hurdy Gurdy, And Other Diatonic Instruments gives you detailed fret placement charts for every scale length from 8 to 32 inches, in eighth-inch steps.

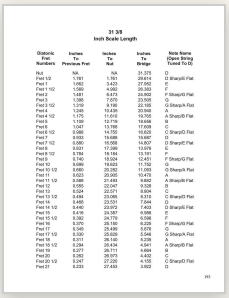

Richard Ash, the compiler, owns Folkcraft Instruments and builds instruments there. Folkcraft has been making dulcimers longer than almost anyone and is known for fretboards that play true. These charts help you build an Appalachian dulcimer that plays every note in tune.
